September is AFIB Awareness Month!

It's estimated that by 2030, 12.1 million people in the U.S. will have AFib. September is AFib Awareness Month and as the number of AFib patients rises faster than originally predicted, the American Heart Association is working to improve education, awareness, and patient care. We encourage you to utilize the [September 2023 AFib Awareness Month](#) resources that can help support your organization's AFib-related activities and learning efforts.

As an additional way to highlight this important month, we're randomly selecting 5 trial sites to receive a trial care package that will help them show off their CHANGE AFib SPIRIT! Stay tuned in the coming weeks for more info! Be on the lookout in your email to hear if your site is selected!
